

Innovative "Green" Dry-Fall Coatings to Protect Your Future
**Project Profile: Dock Side Crane –
TSI Terminal, Vancouver, BC**
Painted with Highland 485-C Dry-Fall 2-K Epoxy DTM (Direct to Metal)

This **Dock Side Crane** is 150 feet up to the boom and 230 feet to the apex. During the painting process the surrounding cranes continued moving containers from the ship to the waiting trailers below.

TSI chose **Highland 485C Dry-Fall 2-K Epoxy DTM** because their environment demands a coating with excellent corrosion protection and because they did not want to worry about paint overspray damage to the busy work arena below. Highland Dry-Fall High Performance Paint is **powder dry within 10-20 feet from point of application allowing overspray to be wiped off without chemicals or buffing.**

They shortened this project considerably by eliminating days of labor intensive brush and roll application. Safe spray application permitted all work in the area to continue unaffected by overspray damage. Since **485-C has a fast recoat time of only 30 minutes** and can be topcoated in one hour the project progressed quickly resulting in lower labor costs and shorter facility down time.

- **Highland Dry-Fall High Performance Solvent-Borne Paint is 3-4 times longer lasting** than conventional alkyd and water-borne paint!
- **Spray application is up to 4 times faster** to apply than brush and roll paint application saving time and money! Don't worry about paint overspray. . . it wipes off clean without chemicals or buffing.
- Dry-Fall is also available in HiTemp coatings - from ambient to 1300°F.
- Maximum Corrosion and UV Protection! Low VOC & HAPs Free Dry-Fall Paint.
